### Factors in primary production influencing milk quality

|                                                                                                                                                                                                                        |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 1. Sejrsen K., T. Bjørn and S.K. Jensen – Prospects of obtaining favourable fatty acid composition of cows milk by feeding .....                                                                                       | 7   |
| 2. Swensson C. and H. Lindmark-Måansson – The prospect of obtaining beneficial mineral and vitamin contents in cows's milk through feed .....                                                                          | 21  |
| 3. Huhtanen P. and M. Rinne - Effects of increasing the milk yield of dairy cows on milk composition .....                                                                                                             | 42  |
| 4. Danielsson H., B. Johansson, E. Nadeau, K. Persson Waller and S.K. Jensen – Fatty acids and flavours in milk from dairy cows fed no synthetic vitamins.....                                                         | 59  |
| 5. Steinshamn H., E. Thuen and U.T. Brenøe – Clover species in grass-clover silages affects milk fatty acid composition.....                                                                                           | 65  |
| 6. Zymon M., J. Strzelański, J. Kowalczyk and S. Osieglowski – The effects of linseed and rape seed cultivars and fish oil on the fatty acid profile of cow milk fat .....                                             | 70  |
| 7. Adler S.A. and Å.T. Randby – The effect of preservation method of barley, maturity of grass silage, and type of protein supplement on sensory milk quality in organic farming.....                                  | 75  |
| 8. Adler S.A. and Å.T. Randby – The effect of fish meal or pea meal on milk fatty acid composition in organic farming .....                                                                                            | 79  |
| 9. Bolstad T., T.H. Garmo, A. Haug, H. Volden, A. Bernhoft and O.M. Harstad – Effect of white clover rich grass pasture allowance on $\alpha$ -tocopherol and selenium content in cow milk .....                       | 84  |
| 10. Czauderna M., J. Kowalczyk, S.K. Jensen, K. Sejrsen and M.T. Sørensen – The use of developed chromatographic techniques to determine vitamin E and conjugated linoleic acid isomers in milk of cows .....          | 90  |
| 11. Kuusela E. and L. Okker – Influence of organic farming practices on selenium concentration of tank milk - a farm study .....                                                                                       | 97  |
| 12. Randby Å.T. – Effect of propanol and dimethylsulphide in grass silage on organoleptic milk quality .....                                                                                                           | 102 |
| 13. Wiking L. and J.H. Nielsen – Effect of automatic milking systems on milk quality ...                                                                                                                               | 108 |
| 14. Michelutti I., K. Haddadi and Y. Le Roux – <i>Staphylococcus aureus</i> related mammary infection in cows: Correlation between somatic cell count and proteolysis during early and chronic phase of infection..... | 117 |
| 15. Skeie S. – Characteristics in milk influencing the cheese yield and cheese quality ...                                                                                                                             | 130 |
| 16. Andrén A. – Influence of genetic milk protein variants on milk quality.....                                                                                                                                        | 143 |
| 17. Svennersten-Sjaunja K., L. Wiking, A. Edvardsson, A.-K. Båvius, L.B. Larsen and J.H. Nielsen – Effect of frequent milking on milk fat and protein.....                                                             | 151 |
| 18. Schei I., O.M. Harstad, I.J. Karlengen, T.H. Garmo, J. Ødegård and G. Klemetsdal – Effects of spring-calving compared to autumn-calving on the lactation curve and milk quality in Norwegian herds.....            | 156 |

### Methods and techniques applied in milk quality research

|                                                                                                                                                                                                                                                                                                             |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 19. Purup S. and L.B. Larsen – Integrated proteomics and biological assays for characterization of non-nutritional effects of butyric acid on intestinal cells .....                                                                                                                                        | 163 |
| 20. Martens H., A. Kohler, N.K. Afseth, J.P. Wold, M. Hersleth, I. Berget, T. Ådnøy, M. Skaugen, T. Isaksson, G. Vegarud, A. Criscione, B.H. Mevik, M.B. Frøst, Å.T. Randby, E. Prestløkken, P. Berg, M. Kent, S. Lien and S.W. Omholt – High-throughput measurements for functional genomics of milk ..... | 172 |
| 21. Wold J.P. and F. Lundby – Approximate non-destructive quantification of porphyrins in butter by front face fluorescence spectroscopy .....                                                                                                                                                              | 190 |

|                                                                                                                                                                     |            |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| 22. Elo K., A.-M. Tyrisevä, P. Anttila, V. Vilva and M. Ojala – Genomic mapping of non-coagulation of milk in the Finnish Ayrshire .....                            | 195        |
| 23. Larsen L.B., A. Wedholm, H.S. Møller, A. Andrén and H. Lindmark-Måansson – Proteomic study of regressions between milk yield and whey protein composition ..... | 200        |
| <b>Milk quality - a future approach</b>                                                                                                                             |            |
| 24. Abrahamsen R.K., G.I. Borge, O.M. Harstad, A. Haug and A. Wetlesen – Milk quality - a future approach from a researcher's point of view .....                   | 209        |
| 25. Refsholt H., J. Brendehaug, A.S. Biong and E. Selmer-Olsen. – Milk quality - a future approach. From the dairy industry's point of view.....                    | 227        |
| 26. Andersen H.J. – The issue 'Raw milk quality' from the point of view of a major dairy industry .....                                                             | 240        |
| 27. Nousiainen J., H. Laitinen, A. Mäkelä and E. Brofeldt – Current and future prospects of milk quality from the Finnish dairy industry point of view .....        | 255        |
| <b>Authors Index .....</b>                                                                                                                                          | <b>267</b> |
